

# Installing Anaconda:

1. Visit the Anaconda Distribution page at <https://www.anaconda.com/download/success>.
2. Select the Windows / Mac (depends on your own OS) tab of **Distribution Installers** (more friendly for begginer).

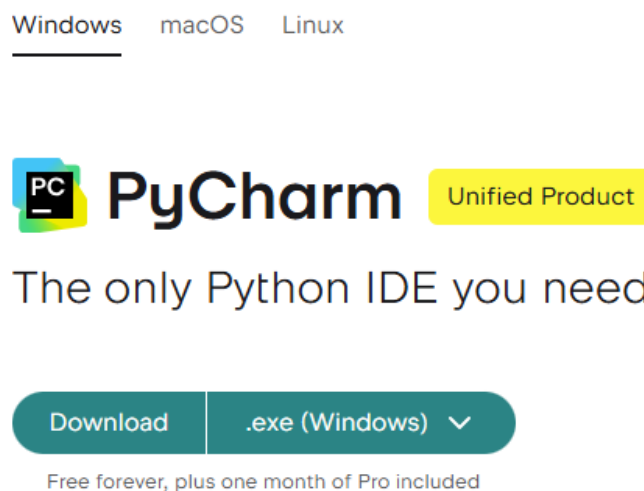

3. Download the Python 3.13 version (or latest version available).
  4. After the download is completed, double click on the installer to run the installation.
  5. In the setup, choose "Just Me" unless you're sure about the "Install for all users" option.
  6. Accept the default destination folder or choose a custom one and click "Next".
  7. In the next screen, **it's recommended to check "Add Anaconda to my PATH environment variable" and check "Register Anaconda as my default Python 3.13"**.
  8. Click "Install".
  9. Once the installation is completed, click "Next" and then "Finish".
  10. Test whether installation is successful.
- Open "cmd", type command "conda -V". If the version of anaconda is output, the installation is successful.

命令提示符

```
Microsoft Windows [版本 10.0.19045.4529]  
(c) Microsoft Corporation。保留所有权利。  
  
C:\Users\59772>conda -V  
conda 4.12.0  
  
C:\Users\59772>
```

## Installing PyCharm

1. Visit the PyCharm download page at <https://www.jetbrains.com/pycharm/download/>.
2. Click on the "Download" button under Windows / Mac section.

3. After the download is completed, click on the installer to run the installation.
4. In the setup wizard, click "Next".
5. Choose the destination folder for the installation and click "Next".
6. Choose the start menu folder and click "Install".

7. Once the installation is complete, click "Finish".

When first startup, it may ask you to select subscription. We select the second one “Continue without a subscription”, i.e. for free.
